Descriptions

Two problems, one solution: the safe transport of radio and swivel-head hand lamp is a recurring challenge for firemen wearing a SCBA. HYBRID Equipment Holster is designed to avoid a well-known situation: you only lean forward for an instance and the radio instantly falls to the ground. During operations loss of communication can have fatal consequences. The HYBRID Equipment Holster allows for safe transport and easy access – mounted directly on the shoulder strap of your SCBA.

Depending on the type of operation also different appliances can be stored in the holster. Two elastic loops at exterior provide additional space for wooden wedges or labelling markers.

Features:

- main compartment: suitable for radio or swivel-head hand lamp
- 2 elastic loops (5 x 3cm) at exterior: suitable for wooden wedges
- holster also can be carried on waist belt
- drain hole at bottom of compartment

Scope of delivery

Holster without further or pictured supplies
