Inner view with partial padding

RESPI LIGHT XL Respirator Mask Bag

Description

RESPI LIGHT XL respirator mask bag is ideal combination of a pouch with compact design, sufficient space even for big respirator masks and a minimum of space required for storage inside of fire engines.

Stored inside bag, components of respirator mask, such as lens, connector and communication unit are well protected due to partial padding of respirator mask bag.

RESPI LIGHT XL is much more convenient for storage inside of fire engines than plastic carrying-cases, particularly when space is rare! Thanks to the infinitely adjustable dual carrying strap, bag can be worn on both, hip or shoulder.

A large marking area within the cover allows for permanent labelling.

Features:

- partly padding for protection of respirator mask
- variable carrying options due to Dual carrying strap
- inlying marking area for durable labeling
- exterior (business-)card compartment for labeling
- bag is washable at 40° C

Scope of delivery

RESPI LIGHT XL Respirator Mask Bag, carrying strap; without further or pictured supplies
